Anyone else have some insight on this issue, or how to work around it. which states: You cannot connect to a server that is running Microsoft Exchange Server from a Microsoft Outlook 2016 for Mac or Outlook for Mac 2011 client after disabling Secure Sockets Layer (SSL) on the server.. Its possible there is another cause; if the servers security certificate has been replaced so that SSL v2 and SSL v3 are no longer supported.. Because problem appeared simultaneously on multiple office MacBook Pros (which for 18 months had been happily using Outlook 2011 with Comcast Hosted Exchange), I suspect a new configuration at the Comcast Hosted Exchange Server caused the issue.. The connection failure occurs because Outlook for Mac uses SSL to establish communication with an Exchange server.. This has been reported to and is in the queue for Comcast Tier 2 support as incident CR553332118, but as of this time I dont know if anyone has yet looked at it.. This affects ALL version of Outlook for Mac (2011, 365, and 2016) if the Exchange Server is configured for STRICT mode.. To complicate things, I understand Comcast Tier 2 will have to go to MICROSOFT, who is actually running the servers for Comcast..
